

# A WordPress plugin for creating interactive images

*Easy drawing tools, fully responsive*

## Give it a try!

Click or tap the different rooms on the floorplan

Highlight different areas of an image and attach more information to each area. Add an image, text, headline, shortcode, gallery, video, audio and more. Reveal more information on click/tap or hover. Select from a pre-built color scheme or specify your own custom colors. Interactive images are fully responsive, SEO friendly and accessible.

## Features

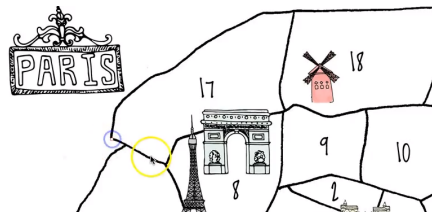

---

### Easy drawing tools

Click to draw

Our drawing tools are easy to use, even to draw complex shapes. Just click your image to draw a point. Remove a point by pressing the control key while clicking. Easily adjust an existing point by simply dragging it with your mouse. You can easily add new points to an existing shape just by clicking. Move the entire shape by grabbing the handle in the middle. You can draw shapes on images of any format - PNG, JPG, or GIF.

## Create colorful highlights

*Draw attention to areas of your image*

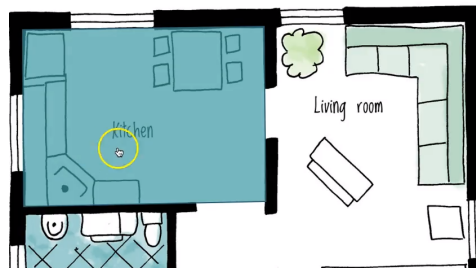

Draw any shape from simple squares and triangles to complex shapes and place them anywhere on your image. The shapes you draw highlight as your user moves their mouse over the image or taps the area on a mobile device. You can define the color and opacity of the shapes and control their style - make the shapes visible at all times, or only reveal them after the user interacts with your image.

---

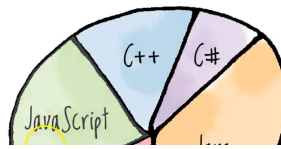

## Customizable colors

*Match your theme or color palette*

Choose from over 20 pre-defined color schemes to quickly and easily create an interactive image. Or, create a complete custom color scheme that matches your theme or your image. You can use multiple color schemes on a single image - great for showing different statuses or categories. Create your own styles including color, opacity, border color, border width, and border opacity.

Select the languages on the pie chart to learn more.

Choose how you'd like your image to display

Add more to each highlightable shape

## Link to other pages

*Add links to highlightable shapes*

As an option, instead of adding more information to each shape, you can optionally link each shape to another page, post, product, or more. You can link to other websites and choose to open the link in a new window or in the same window. You can also link to documents, forms, photos, and downloadable files.

---

## More Features

### Responsive

Draw Attention works on all devices and adjusts your image to screens of any size. Works great on touch screens, too.

### Quality

Draw Attention is progressively enhanced and built according to web standards and best practices. The code is high-quality and carefully tested.

### Accessible

Your content is accessible to screen readers. All highlightable areas can be accessed by keyboard commands. Anyone on any device can use your interactive image.

## Use Anywhere

Place your image into any page or post with a simple shortcode, or use our convenient Beaver Builder module. Easy to display wherever you'd like!

---

## Always Improving

*What's new in Version 1.8*

- Multiple color highlight shapes on a single image
  - Ability to always show hotspots
  - Refactored and more performant JavaScript
  - Import/export functionality - easily move images from one site to another
  - Drag and drop to re-order highlightable areas
  - Improved highlight area drawing tool
- 

## Testimonials

*What our awesome customers have to say*

Wow! Easy to Use and Works wonders

After playing around quite a bit with Shapes, area maps, and canvas I had a heck of a time getting exactly what I wanted. This product solved all of my problems. This is a lot of cool functionality on one great plugin.
